## SECTION 1. PREFACE

The compilation of this glossary has resulted from recurring problems over many years in trying to define geographic names which have been labelled with inappropriate generic terms (which will be called "designators") and allocating the appropriate designator code for recording purposes in compiling Registers or Gazetteers.

The essential problem arises from our early explorers, surveyors and settlers, who were in the main English, applying designators to names for features which just do not fit the landscape. The English designator, BROOK, for example, leads one to imagine there is permanent running water in a stream, but this is only the case in a small proportion of Australia and yet this term is applied universally throughout Australia although creek is more frequently used, but offers no better explanation of the landscape.

There are a number of designators for which the Australian application is distinctly different to that for which the term is meant. This document has drawn attention to these in the glossary attached, although perhaps not adequately at this stage. INLET is a typical term, because there are many coastal "Inlets" in Australia, but are they inlets or estuaries, or something different? Even the designator DESERT, sometimes seems inappropriate when one considers for instance, the Little Desert (in the State of Victoria), is not covered with sand dunes, but stunted mallee-scrub!

An examination of the Australian Gazetteer reveals a number of designators which have not been addressed in this glossary, for which no geographical names have yet been located, or may not be applicable.

## **SECTION 2. INTRODUCTION**

### **(i) TECHNICAL TERMS.**

This listing of technical terms is far from complete, but it covers some of the more common and some not so common terms one might encounter during nomenclature studies.

### **(ii) GLOSSARY OF DESIGNATORS.**

This glossary is a provisional list of geographical designators in common use in Australia. It is by no means comprehensive at this stage, and additional names from other sources and variant applications of terms are sought to improve it. Please note that "designators" refers only to those names that are in use as part of a geographic name. There are many geographical terms in other glossaries and dictionaries which describe a feature and are not always part of the name; in general these have been omitted from this list. Some that have been included, for which an example is not given, may later be omitted if an example cannot be found.

Terms and expressions are listed alphabetically, and are in general use in Australia and overseas unless referenced -

(A) terms in common Australian usage

(L) terms in local (Victoria) use only.

The glossary is cross referenced in two ways:-

(a) Designators or terms appearing in the definitions which are defined under another heading are printed in capital letters.

(b) Definitions which are taken from the reference texts are given the number of the text as shown in the list of references.

The glossary is formatted into three columns as follows:

Column 1 "FEATURE" - lists the designators alphabetically according to standard dictionary practice.

Column 2 "CODE" - shows the designator code, which indicates the type of feature to which the designator refers and has been abbreviated to a code of four letters or less for convenience of processing and listing.

Column 3 "DESCRIPTION and EXAMPLE"- contains the definition of the designator along with appropriate example.

### **(iii) DESIGNATOR CODES.**

This is an alphabetical listing of Designator codes of topographic features or designators, for use in the compilation of Registers and Gazetteers. The various statutory bodies throughout Australia have adopted a standard list of Designator Codes. Supplementary designator codes will be required to provide for certain mapped features and topographic terms which are peculiar to Australian mapping, or which have not otherwise been provided for.

## SECTION 4. LIST OF SELECTED TECHNICAL TERMS

<b>TERM</b>	<b>DEFINITION</b>
1. ACRONYM:	Word formed from the initial letter or letters of each of the successive or major parts of a composite term.
2. ALLONYM:	Eack of two or more toponyms employed in reference to a single topographic feature.
3. ALTERNATIVE NAME:	One or two or more names for the same thing.
4. ANTHROPONYMY:	The study of personal names.
5. ATLAS:	A bound collection of charts or maps; a bound collection of tables, charts or plates illustrating any subject.
6. CADASTRAL MAP:	A large scale map which shows individual properties.

7. CONVENTIONAL NAME: A name used widely or over a long period of time which warrants retention even though not otherwise approved.
8. CULTURAL FEATURE: Anything made or significantly modified by man, including a road, railway, bridge etc.
9. DESIGNATION: A common noun indicating the type of thing named. A geographic name does not always contain a generic term, and when it does the generic term does not always make it clear the nature of the thing named.
10. DIACRITICAL MARKS: Any marks added above, below or inside a letter as ordinarily written, including tone marks where appropriate.
11. ENDONYM Name used in a region in which the feature is located, regardless of the script in which it is expressed in writing.
12. EXONYM: Name used in a specific language for a topographical feature situated outside the area where that language has official status.
13. FEATURE NAME: The name of a natural feature.
14. GAZETTEER: A list of geographic names identifying the nature and location of the thing named. Most lists of names issued by standardising bodies are gazetteers.
15. GENERIC ELEMENT: That part of a toponym which consists of a generic term. The generic element does not necessarily indicate the type or class of feature of the item named.
16. GENERIC TERM: A common noun which describes a topographical feature in terms of its characteristics and not by its proper name.
17. GEOGRAPHIC DICTIONARY: A compilation of geographic names that provide the identifying and locating information included in gazetteers and such additional geographic information as population, area, resources, etc.
18. GEOGRAPHIC ENTITY: A comprehensive expression referring to any object or place which has a geographic name.
19. GEOGRAPHIC NAME: A proper name consisting of one or more words, used to designate an individual geographic entity.
20. GLOSSARY: Usually confined to a group of words on a specialised subject; more likely than a dictionary to specify the meaning which should properly be attributed to a word.
21. HYDROGRAPHIC FEATURE: Any body of water, including flowing water on land.

22. HYDRONYM: A toponym applied to a hydrographic feature.
23. MAP INFORMATION: Words on a map which do not constitute a geographic name but which indicate the presence of something or characteristic of the area.
24. NAME INDEX: Usually a list of names in a publication indicating the place in that publication where the name in question appears.
25. NATURAL FEATURE:  
(or physical feature) Any natural entity which may have a geographic name.
26. ODONYM: The proper name of a traffic route feature.
27. ONOMASTICS: The study of names as names.
28. ORONYM: The name applied to a feature of elevation such as a mountain or hill.
29. PLACE NAME: The term applied to a populated place.
30. POPULATED PLACE: Any inhabited place.
31. PRINTING FORM: The manner in which the letters are put together as regards, eg., capitalisation, spelling, or hyphenation.
32. SPECIFIC TERM The element of a geographic name identifying the type of entity.
33. TOPOGRAPHIC MAP: A map of a sufficiently large scale to show the detailed surface features of an area, including its relief, usually by means of contours, and such physical and cultural features.
34. TOPONYM: The proper name applied to a topographical feature.  
Comprehensive term for geographical and extraterrestrial names.
35. VARIANT NAME: See ALLONYM.
